

# The **a4wide** package

Jean-François Lamy      Alexander Holt

August 1994

The **a4wide** package redefines the margins so that they are more in line with what we are used to see. It was written by Jean-François Lamy in July 1986 and minimally modified for L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> by Alexander Holt, August 1994. Depending on the base font size, it modifies the margins as follows:

Base font size (pt)	Number of lines in page body	Width of text line (in)	Width of left and right margin (in)	Width of marginal notes (in)
10	53	5.875	0.25	0.75
11	46	6.125	0.125	0.75
12	42	6.375	0	0.75
